

Success Story:

Virtual urgent care for overnight needs

Challenge

A regional health system in Oklahoma struggled to maintain a reliable 24/7 virtual urgent care program. Overnight coverage relied on emergency department physicians already managing full in-person caseloads, leading to:

- Long wait times
- Physician burnout
- Poor patient experience

Solution

The health system partnered with LT Telehealth to establish a dedicated coverage model staffed by experienced physicians and APPs.

Key elements included:

- **Dedicated team:** Two physicians and four APPs providing consistent overnight virtual care with patient requests answered **within 30 minutes**.
- **Regulatory compliance:** A supervising physician ensured alignment with state guidelines.
- **Operational integration:** All care delivered through the system's existing **Epic EMR and embedded video platform**.
- **Financial sustainability:** LT Telehealth enrolled all providers with the health system's payor network, enabling reimbursement for telehealth services.

The LT Telehealth partnership transformed after-hours coverage into a **reliable, patient-centered and revenue-sustaining model** — supporting both the health system's mission and operational goals.

“

We have appreciated the relationship with LT and the resultant high quality of care we've seen.”

Facilities' CMO

Results

For patients: Rapid access to care within 30 minutes.

For ED physicians: Relief from virtual care responsibilities.

For the health system: Protected market share by keeping patients within the network while optimizing ED operations and improving care delivery.

For operations: Consistent performance meeting SLAs with dedicated project management support.

“

This partnership provided us with what we needed to give our patients reliable 24/7 urgent care, which was met through well-planned collaboration and implementation.”
